## Aim:

Write a C program to create dynamic memory allocation using malloc()

## **Source Code:**

```
malloc.c
```

```
#include <stdio.h>
#include <stdlib.h>
int main() {
   int *p,i,n,sum=0;
   float avg;
   printf("Enter the number of integers: ");
   scanf("%d",&n);
   p=(int*)malloc(n*sizeof(int));
   if(p==NULL)
      printf("Insufficient memory");
      exit(0);
         }
         printf("Enter %d integers:\n",n);
         for(i=0;i<n;i++)
         {
            scanf("%d",p+i);
         for(i=0;i<n;i++)
            sum+=*(p+i);
            avg=(float)sum/n;
         printf("The sum of the integers is %d\n",sum);
         printf("The average of the integers is %0.2f\n",avg);
         free(p);
         return 0;
}
```

## Execution Results - All test cases have succeeded!

```
Test Case - 1
User Output
Enter the number of integers: 3
Enter 3 integers: 1 5 3
The sum of the integers is 9
The average of the integers is 3.00
```

Test Case - 2		
User Output		
Enter the number of integers:	5	

Page No: 2

ID: 22K61A0592

Enter 5 integers: 1 2 3 4 5 The sum of the integers is 15 The average of the integers is 3.00
